### Instructions for usage of protective hoses for pneumatic pipe plugs

1. Before usage pipe plug and protective sleeve must be properly cleaned.
2. Handles are used to set the protective sleeve on a pipe plug.
3. Before first usage it is recommended to partly vacuumise pipe plugs 350-600, 375-750 and 500-1000. This way protective sleeve is easier to put on a pipe plug.
4. Protective sleeve must be symmetrically placed in the middle of the pipe plug.
5. Rubber sleeve fits tightly during manipulation, despite it is recommended to fit it additionally on eye bolts over the handles of the hose .
